Huntington's Disease (HD) affects a person's mobility, emotions and thinking, and gradually worsens over time.

SYMPTOMS

The symptoms of Huntington's disease include problems with movement, thinking and cognition, and difficulties with mood.

INHERITANCE

Children conceived naturally by somebody with Huntington's disease have a 50:50 chance of inheriting the gene themselves.

10  **25**

DISEASE PROGRESSION

The disease typically progresses slowly over a 10-25 year period.
