HEALTH-E-RND Study

We would like to invite you to participate in a new study which is designed to assess how patients are affected by their Huntington's disease. We will develop a new Quality of Life scale specifically and uniquely for those who have Huntington's disease and for their Partners. This study is being held in parallel to the Enroll-HD study which is already running in Ireland.

We are recruiting participants who are HD gene positive or companions of an individual who is HD gene positive.

The second part of this study will be to develop and use a telehealth platform to provide useful and needed services to those with Huntington's disease and their partners/care givers.

We hope to be able to bring specialized services across Ireland and then Europe to reach those who are far from centres of specialized care.

If you think that participating in this project would be of interest to you or your partner, please contact us at the email address below or call us by phone and we can arrange to answer any questions you may have and to send you a patient information leaflet.

If you have any further queries, please call or email:
